local focus, global strength

voicemail

- **Tired of playing telephone tag with important customers?**
- **Are your receptionists overworked during peak period and messages aren't getting through?**
- **Are you losing sales as a result of unanswered calls?**

SVMi-4

Integrated Voice Mail for Samsung DCS 70.

Few businesses today can afford to be without the convenience of voicemail. Samsung SVMi-4 is a powerful communications tool designed specifically for the Samsung SVMi-4 that provides advanced call processing features such as voicemail and auto attendant.

Talk to a Samsung communications specialist today about employing SVMi-4 in your company to save money, increase efficiency and most importantly boost productivity and improve customer service.

Digital CommunicationSolutions

As SVMi-4 links directly to the intelligence of the Samsung DCS 70, it is faster, more reliable and better value for money than voice mail products which connect to the telephone system through standard analogue telephone extensions. And this also makes SVMi-4 very simple to use. At the touch of a button each user can, for example, record their own personal greeting; screen calls before choosing to answer them; record and send messages to a group; and record personal reminders or even conversations.
